Professor Robert Desimone
"Neural Mechanisms of Selective Visual Attention"
Thursday, October 19th
5:15pm in Love Auditorium*
Levine Science Research Center (LSRC)

Professor Desimone is recognized internationally in the field of behavioral neurophysiology, and specifically for his research on the nature of neural activity necessary for normal memory and attention. As National Institute of Mental Health Scientific Director and Chief of the Institute's intramural Laboratory of Neuropsychology, Dr. Desimone's work focuses on understanding the electrical activity in the brain involved in attention, perception, and memory in primates.
